

Product URL Importer for WooCommerce

Demo Guide

What this plugin does

Product URL Importer lets you create WooCommerce products automatically from the URL of a product page on another website. You paste one or more product URLs, and the plugin detects the title, description, price, main image, image gallery, and SKU, then creates a matching product in your WooCommerce store — saving you from copying each product by hand.

About this demo version

This build is a free trial limited to **10 successful product imports**. No activation code is needed — simply install it and start importing. Once the 10-import limit is reached, the plugin stops creating new products and shows a message with instructions to purchase the full, unlimited version.

Installation

- 1 In your WordPress admin, go to **Plugins** → **Add New** → **Upload Plugin**.
- 2 Select the plugin .zip file you received and click **Install Now**.
- 3 Click **Activate**. WooCommerce must already be installed and active on the site.

How to use it

- 1 Go to **WooCommerce** → **Import from URL** in the admin menu.
- 2 Paste one or more product URLs into the text box, one URL per line.
- 3 Choose a product status (Draft is recommended, so you can review each product before publishing).
- 4 Optionally, select a category from the dropdown — all imported products will be assigned to that category. Leave it as “No category” if you prefer to sort them afterwards.
- 5 Click **Import**. Each URL is processed one at a time, so a single failed URL will not stop the rest of the batch.
- 6 Each result shows an edit link to the new product: a checkmark for success, a warning icon if the product was created without a price, or a cross if the import failed.

Note: some eshops — usually large chains — actively block automated access to their product pages and do not allow data to be retrieved this way; in that case the import will fail for that URL.

A note on copyright

Only import product pages you have the right to use — for example, your own eshops, a supplier feed, or a partner site that allows it. Copying text or photos from a competitor's website without permission may infringe copyright or that site's terms of use. Responsibility for how the plugin is used rests with you.

Getting the full version

The full version removes the 10-import limit and includes an activation code tied to your site's domain. To purchase it or ask any questions, please get in touch using the details below.
